

The project that you are about to see was based on the script of all seasons of the tv show Game of Thrones.

## THE DATA BASE INSTALATION

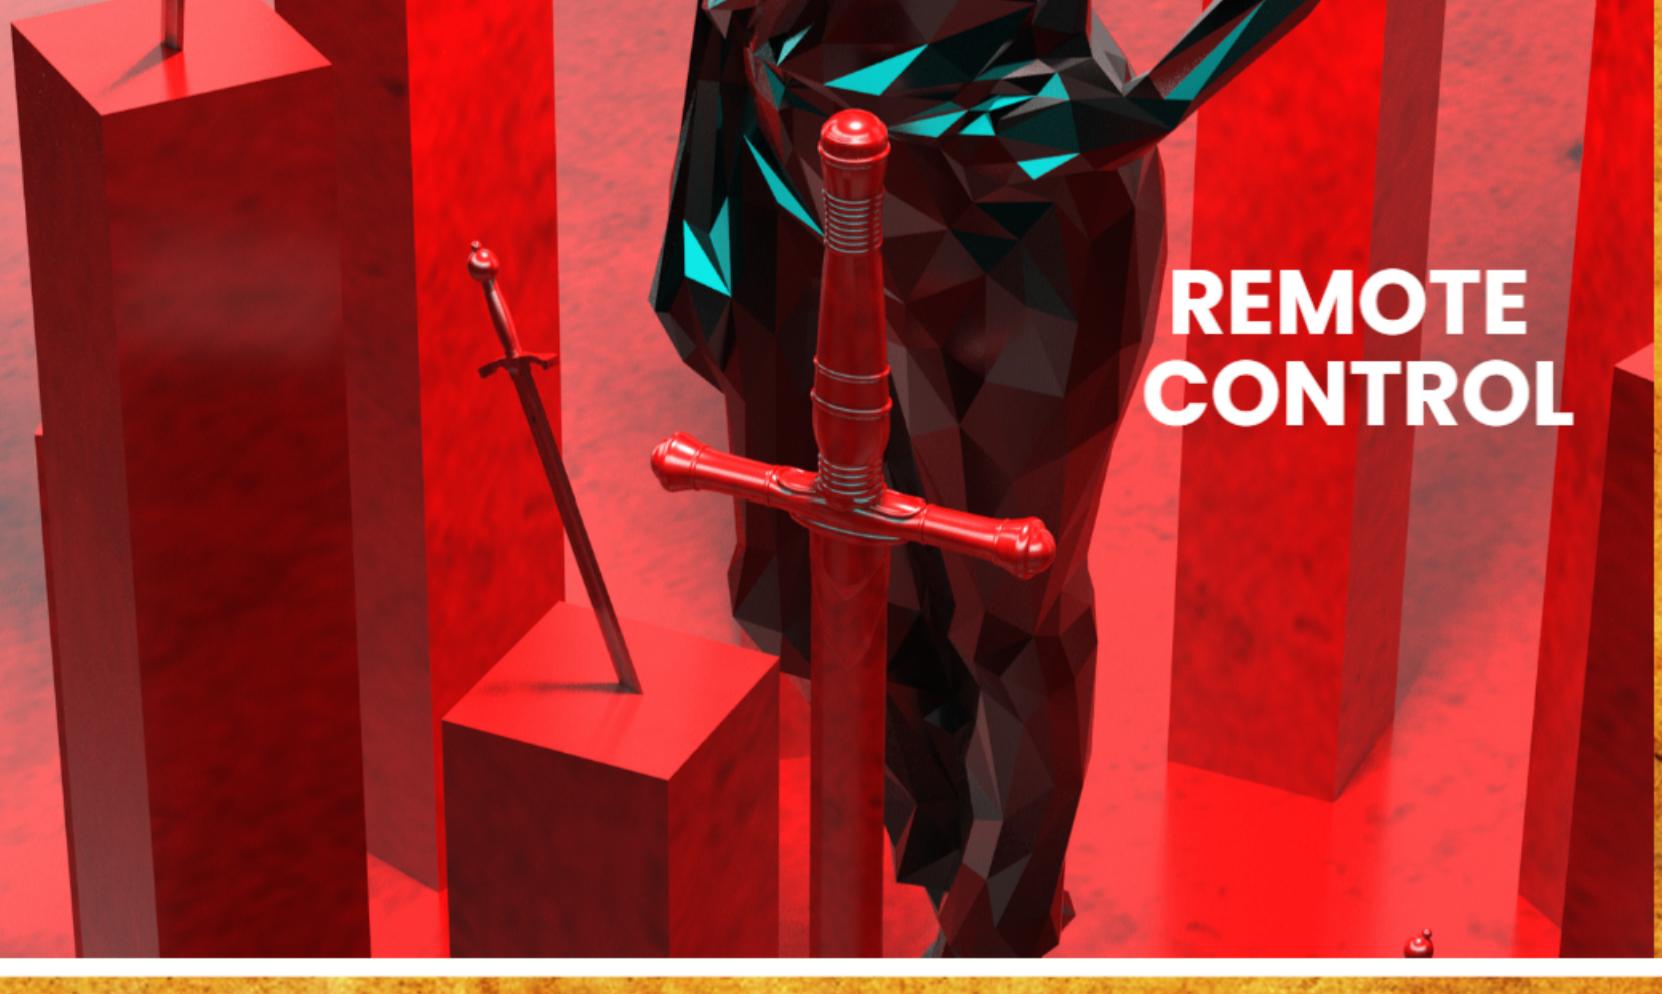

In the data base installation is composed basically by three parts inside a cylindrical room, each spectator will enter to the installation with headphones that will make possible a more interactive experience.

The first part that is in the middle, as you can see in the video, has 10 sculptures of swords and one bigger sword, symbolizing the iron throne, the big one works like a remote control that allows the viewer to select which kind of data he wants to see. The other swords are over a platform that can rise until an altitude of 2 meters, the vertical faces of the cube that forms the platforms have a digital screen that play videos, each sword has a camera that catch the face movements of the viewer so if the spectator see an specific screen he would listen the audio of the video that is seen. In this way the viewer can see more dynamic graphics in which the altitude that has each platform in a specific moment that is represent the numerical values of the graphics, the videos that the spectator will see and hear are related to the data that is making reference to, for example if the data is about the character Daenerys Targaryen the videos will be about some scenes of the Serie in which this character appear and some iconic words that she have said in the whole Tv show, and if the data is about an specific word it would be played the moments in which this word was mentioned. To give the time value in which the values are (In which chapter or season) the knob of the big sword will have another screen that will show the number of the chapter and the season in which is this data. The viewer can stop the graphic to see clearer the data if he wants. In this part of the installation are represented the character participation graphic, the script density of dialogues graphic, and the Important slogans graphic (all this graphics are in the infographic).

### PLATFORM GRAPHIC

REMOTE  
CONTROL

The project that you are about to see was based on the script of all seasons of the tv show Game of Thrones.

## THE DATA BASE INSTALATION

The second part is composed by a map that is painted in the wall, an some spot lights that move an change its colors and radios, this lights will be projected over the map to show some specific parts of it, the size of the projection will represent the numerical value and the color of the light will represent each season of the Tv show, as in the first part of the installation the viewer can stop the graph and play it by using the big sword. In this part of the installation will be represented the important places of got graphic (is in the infographic).

The third part of the installation is a sculpture in which you can see different words with different size, color and position. This part will represent the trending topic of got graphic (this graphic is in the infographic)

In the entrance of the installation will bee a panel in which the viewer can see the infographic and will be delivered some booklets with the same infographic and instructions of how to see the installation and how to use the big sword remote control.
